

## DATASHEET

# TowerOne – Cell Site Management

### ABOUT TOWERONE

TowerOne offers customers a tower sharing solution to centralise all site information into one platform, whilst using unique techniques to obtain additional tenants per site. The management of leases, billing and the tower sharing processes are all captured in Towerone. Towerone is the complete one stop end to end solution for tower sharing companies to manage their cell sites.

The performance and success of each and every project is directly linked to the performance and operation of each individual site. Real-time information, on site statistics and assets are crucial to making key decisions. TowerOne has been designed by experienced telecom and network engineers to allow you to remotely manage multiple sites and to optimise your site performance.

### KEY FEATURES TOWERONE

-  Tower Sharing Process Management
-  Task Management for Cell Site Maintenance & Tank Refueling
-  Dashboard Views of Cell Site Infrastructure Performance
-  Central Documentation Control
-  Lease Management and Billing Control
-  Site Auditing and Quality Control
-  Access Management System
-  Asset Management
-  Potential and Current Customer Web Portal
-  Security Management
-  RMS Integration

“The complete one stop end to end solution for tower sharing companies to manage their cell site infrastructure”

### VALUE PROPOSITION

#### A Complete Central View of the Cell Site

TowerOne was designed purely for tower sharing. From one central interface TowerCo's have complete visibility of their infrastructure. This allows them to effectively manage the tower sharing processes and to improve tenant ratio per site.

#### Monetizing Cell Site by Sharing

Within a controlled customer web portal, TowerOne allows the TowerCo to promote the availability of their current infrastructure towards potential tenants. This ultimately enables the monetisation of the cell site when simple rental processes are implemented.

#### Infrastructure monitoring

By using intelligent RMS controllers and sensors, the TowerOne NOC user interface, Siteone, enables TowerCo's to have complete visibility of the cell site performance.
