

DATASHEET

AssetOne - Life Cycle Asset Management

ASSET VISIBILITY

AssetOne tracks assets in warehouses, vehicles and on sites. This brings operations together with management inventory, repairs, spares management and reporting. AssetOne makes asset information available to all personnel involved in the network, engineering, logistics, finance and planning.

ASSET TAGGING

AssetOne is designed to facilitate information and data entry using bar code readers and RFID tags. Barcoding is the standard method used to receive parts to the asset database and to the asset warehouses. All transactions are then tracked using barcode readers. Users can even confirm barcode information on their mobile devices or obtain asset reports at the press of a button.

PROJECTONE INTEGRATION

AssetOne is an integral part of ProjectOne, the leading Project Management tracking section. All data links can be customised to match the customer's internal systems ensuring that the data is consistent on all platforms through which system it can be received

KEY FEATURES

-  Easy Scanning and Location Placing
-  Dashboard Views of Asset Locations and Availability
-  Online Material Request Handling
-  Asset Scrapping and Recycling
-  Logistics, Shipment Tracking and Reporting
-  Asset Monetisation
-  Asset Demand Planning
-  Warehouse Task Management
-  Spare Parts Management

" AssetOne enabled Zain to consolidate several warehouses across Africa into one central view "

Head of procurement Zain

BENEFITS

Transaction Visibility

Assetone captures the movement of assets. The transactional handover, in which assets are typically lost, is completely controlled by AssetOne.

Monetise Only Inventory

Assets identified for reuse are refurbished and registered into asset purchasing web portals for various companies to purchase. Asset monetization of inventory previously thought of as scrap allows additional customer revenue.

Supply and Demand

Visibility into available inventory when creating material requests.

Demand Planning

Highlights material demands based on future project plans.
