TURNKEY PROJECTS

ProjectOne is the end-to-end network deployment platform managing expansions or turnkey projects from site acquisition to final acceptance. ProjectOne empowers customers to obtain complete visibility of all aspects in the network deployment process. ProjectOne is a dynamic system with a simple user interface that adjusts to any project process requirements. The milestone notification features and advanced reporting drives the workforce to build sites with ease.

USER ADMINISTRATION

Customers can create their own projects with easy tracking and reporting facilities to track and report the most complex processes. The administration tool, AdminOne, empowers the customer to easily create projects, user interface, menus, capturing processes, building fields, dashboard creations, setting milestone dependency rules, activating notification messages, access management and customising advanced reporting templates.

DATA INTEGRITY

Built by industrial specialists who know the challenges of deploying aggressive telecom turnkey network rollouts. The Nexsysone team understands and has implemented features that drive the data integrity and usage of the platform. Accurate and up to date information is a critical success factor to any project management software. User KPI reports and notification reminders are scheduled to highlight actions needed, whether it be updating a milestone or approving a document.

> " The most comprehensive project management software we have ever used "
>
> Regional Manager NSN Myanmar Ooredoo Project

BENEFITS
Efficiency Improvement

Using the best practices gained since 1996 delivering on over 200 projects worldwide.

Complete Visibility from a Single Source

Advanced reporting tailored to ensure the project meets targets and is within budget.

Prioritising Build Programs Effectively

TRSOne ensures the path analysis of transmission and progression bottlenecks are aligned with the build progress. The project will know where and when to focus their build efforts in order to launch the network correctly.

SIM Sales Progression

Using TECH-MON, ProjectOne enables SIM card distributers to display current and future technology coverage to potential subscribers.

- Workforce Task Management
- Project Tracking and Reporting
- Cell Site Asset Management
- Central Documentation Approval and Storage Facility
- Quality Management and Performance Control
- Visualise Site Progression, RF and Typology Over Map View
- Lease and Billing Management
- Technology Coverage Forecasting
- Scoping, Costing and Invoicing Reporting System
