

Jim Prosser

CEO and founder of NEXSYS-ONE with over 33 years of international experience within the telecommunication services industry. Previously the Senior Vice President for a global systems integrator spanning business across 40 countries. Jim has maintained a successful history within the industry pioneering new initiatives and service business lines to improve network infrastructure deployments, remote operations, and managed services efficiencies. A customer focused entrepreneur who values the importance of teamwork and dedication to achieving customer success within a great working environment.

Jim previously created and pioneered the remote integration center concept (RIC) in 2001 that centralized remote operations to serve on site field engineers performing network integration and maintenance activities. The RIC concept ultimately expanded from Sweden where it supported one of the world's first 3G UMTS network deployments to over 15 countries across all continents.

In 2014, Jim became the sole owner of the NEXSYS-ONE platform that was initially created in 2001 to support the RIC services and the ever-growing PMO services to advance the acceleration of 3G network deployments. Today, NEXSYS-ONE is used to build and maintain some of the world's largest 5G network deployments for mobile operators, serving Tower companies to manage their infrastructure business and small to medium and large system integrators. Solutions that also support the alternative energy and public safety industries.
